Disclosure; Fig 1; 25pp; English.

The amino acid sequence is that of tumour necrosis factor alpha
binding protein which contains the extracellular domain of human TNF
alpha receptor. It is soluble and can be used in the regulation of
TNF-mediated responses by binding and sequestering the cytokine. It
can therefore be used therapeutically to treat disorders such as
cachexia, sepsis and autoimmune diseases, specifically rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-JUN-1990; GB-013410.

CC Expression of this receptor is regulated by shedding of the extracellular CC inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell ctype. The only region of the receptor whose structure affects the CC shedding response is the spacer region (see R75012) in the extracellular CC domain. This region is located close to a site of cleavage of the CC molecule, and links the Cys rich module to the transmembrane domain. The spacer region was used to create the chimeras CC between human p55 TNF-R and murine epidermal growth factor receptor CC (EGF-R) that are represented by R75007-11. This spacer region was CC subjected to deletion mutations (R75013-25) and substitutions CC (R75026-47). Of the spacer region, the most important residues are CC (R75026-47). Of the spacer region, the most important residues are conformation of these residues, with the exception of a limited CC enformation of the protein adversely effect the shedding process. CC inhibitors of a protease that is capable of cleaving the soluble TNF-R CC from the cell bound TNF-R. Fragments of these inhibitors can be seen in CC enterior of a protease that is capable of cleaving the soluble TNF-R CC from the cell bound TNF-R. DNA encoding TNF binding protein and TNF- receptor - used in PT DNA encoding TNF binding protein and TNF- receptor - used in tumour treatment and to understand mechanismsm to TNF action PT tumour treatment and to understand mechanismsm to TNF action PT tumour treatment and to screen the HS913T cDNA library.

CranNF-RB (Q06284) was used to screen the HS913T cDNA library.

CranNF-RB (Q06282) was used to screen the same way to construct a plasmid (pADTNF-R) expressed proteins are useful construct a plasmid (pADTNF-R) expressed proteins are useful as pADTNF-BP (see Q06282). The expressed proteins are useful prophylactically and therapeutically to control disorders which involve the damaging effects of TNF-alpha or beta (e.g. infectious or parasitic diseases, shock, cachexia, autoimmune diseases, adult respiratory distress syndrome etc., or side effects of treatment with CTNR-alpha). They can also be used as diagnostic reagents for assaying TNF and in study of TNF-receptor interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                 to produce a cDNA fragment for use as aprobe to screen a human placental cDNA bank constructed in lambda gtll. Positive clones were identifed and sequenced. DNA constructs comprising the TWF-BP coding sequence may also contain a fragment encoding a human Ig domain. Recombinant constructs are used to transform cells to confer improved TNF-binding properties.

Scoring table: PAM 150 Gap 11

Searched: 120446 segs, 36531193 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir56 1:pir1 2:pir2 3:pir3 4:pir4 5:nr13d

Statistics: Mean 40.411; Variance 71.735; scale 0.563

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#title Soluble forms of tumor necrosis factor receptors (TNF-Rs).
The CDNA for the type I TNF-R, cloned using amino acid sequence data of its soluble form, encodes both the cell surface and a soluble form of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            #journal Proc. This protein is one of two known receptors for both TNF-alpha
(cachectin) and TNF-beta (lymphotoxin).

                                          restriction endonuclease evidence indicates that a single gene codes for the alpha chain common to the four dimeric hormones: thyrotropin, lutropin, follitropin, and choriogonadotropin previously the mature alpha chain (residues 25-116) was isolated from each of the hormones and its sequence was determined, as documented below
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    #domain intracellular #status predicted #label INT\ #binding_site carbohydrate (Asn) (covalent) #status

#title Human follicle stimulating hormone (hFSH): first proposal:

the amino acid sequence of the alpha-subunit (hFSHalpha)

and first demonstration of its identity with the

alpha-subunit of human luteinizing hormone (hLHalpha).

ROL. IMMUNOL. 30:165-175(1993)
-i- FUNCTION: RECEPTOR FOR THE ALDHA. THE ADAPTOR MOLECULE FADD
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
PERFORMS CASPASE-8 PROTEDLYIC ACTIVATION WHICH INITIATES THE
SUBSEDUENT CASCALE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
SUBSEDUENT CASCALE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
PROTENSES) MEDIATING APOPTOSIS (BY SIMILARITY).
-i- SUBUNIT: TWE BINDING TO THE EXTRACELLUAR DOMAIN OF THER LEADS TO
HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. INTERACTING
PROTEINS SUCH AS TRAFFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO
TNER1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
NF-KAPPA B SIGNALING (BY SIMILARITY).
-i- SUBCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- SUBCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- SUBCELULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

RA HIMLER A., MAURER-POGY I., KROENKE M., SCHEURICH P., PEIZENMAIER K.,
RA LANTZ M., OLSSON I., HAUPTMANN R., STRATOWA C., ADOLF G.R.;
RL DNA CELL BIOL. 9:705-715(1990).
CC -1- FUNCTION: RECEPTOR FOR TMR-ALPHA. THE ADAPTOR MOLECULE FADD
CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
CC RECRUITS CASPASE-8 PROTEDLYTIC ACTIVATION WHICH INTIATES THE
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC PERFORMS CASPASE-8 PROTEDLYTIC ACTIVATION WHICH INTIATES THE
CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
CC PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).
CC -1- SUBUNIT: TMF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
CC PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO
CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. APOPTOSIS AND
CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
CC 1- SUBGELULIAR LOCATION: TYPE I MEMBRANE PROTEIN.
CC 1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

Scoring table: PAM 150 Gap 11

Searched:

69112 seqs, 25083644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swiss1

Statistics: Mean 42.029; Variance 63.165; scale 0.665

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
AGGREGATE CALLED THE DEATH-INDICING SIGNALING COMPLEX (DISC)
PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
PROTEASES) MEDIATING APOPTOSIS.

-1- SUBUNIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF THEFI LEADS TO
HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO
TNERI COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
NET-YADDS B CITABLE TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
NET-YADDS B CITABLE TO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
                                                                                        REPEAT

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
